NANO-D CONNECTORS

0.635 mm (.025") CONTACT SPACING

In addition to the standard range of Micro-D connectors and assemblies, AXON' is able to offer Nano-D connectors and assemblies based on the highly reliable Twist Pin contact technology. Such solutions are ideal for applications including aerospace, military, industrial, medical or off-shore which require extreme miniaturisation, space or weight saving and reliability. AXON' Nano-D connectors meet the requirements of MIL-DTL-32139.

► Different configurations

AXON's range of Nano-D connectors is available in several different configurations:

- Nano-D rectangular connectors for cables.
- Nano-D rectangular connectors for PCBs.
- EMI versions.
- High density Micro-D connectors.

► Characteristics

- 0.635 mm (.025") contact spacing (double the density of a Micro-D).
- Number of ways: 9, 15, 21, 25, 31, 37 and 51.
- Single or double row.
- High reliability twist pin contacts.
- Metal shell construction with captivated hardware.

AXON' has also developed custom designed Nano-D connectors:

- High density circular Nano-D connectors.
- Single row Nano-D strip connectors.

Special Nano-D connectors available on request.

REACH & RoHS COMPLIANCE

▶ RoHS compliance

AXON' CABLE has been pro-actively implementing measures for many years to ensure compliance with the European Directive 2011/65/EU which came into force on 21st July 2011. The Directive prohibits the use of Hazardous Substances such as lead, mercury, hexavalent chromium, cadmium, bromine compounds (PBB and PBDE) and various phthalates. It relates to all components of products which are used in the manufacture of electrical and electronic equipment.

As a cable and connector manufacturer, AXON' has taken actions to ensure compliance with directive 2000/53/EC applicable since 21st October 2000.

▶ Application of REACH

The new EU regulation on the Registration, Evaluation, Authorisation and restriction of Chemicals (REACH) came into force in June 2007. The regulation concerns the authorised use of chemicals. It requires manufacturers and importers to register substances and their use with the European Chemical Agency (ECHA).

AXON' CABLE is known as a "downstream user" with respect to the REACH regulation, and a manufacturer of "Articles". AXON' CABLE products are not intended to release any undesired substance under normal and reasonable operations of use.

To this day AXON' CABLE have not identified any component containing any SVHC in their product range.

JUMPER WIRING (DUAL ROW)

▲ NANO-D - JUMPER

DIRECT WIRING

DIRECT WIRING

Direct Wiring is where every pin number is connected to the same pin number at the other end, e.g. pin 1 to pin 1, pin 2 to pin 2, and so on. If the two connectors are not of the same gender (i.e. one male, one female) this will result in physically straight or flat wiring with no crossovers. This is therefore the normal convention with opposing gender connectors.

INDIRECT WIRING

Indirect Wiring is usually requested where both connectors on the jumper are of the same gender (i.e. both male or both female).

In this case, if Direct Wiring was chosen it would result in many physical cross-overs of the wires (crossing from the leftmost pin on the top row to the rightmost, and the same on the bottom row). Indirect Wiring ensures that the physical position of the wires remains straight or flat, i.e. the leftmost pin on the top row of connector 1 will go to the leftmost pin on the top row of connector 2, and so on.

HIGH DENSITY CONNECTORS

NANO-D PITCH

As the need for increased miniaturisation is becoming even greater, AXON' has developed an ultra-high density solution within the existing micro connector size. By putting nano contacts and nano pitch spacing into an existing micro shell, extremely compact connectors with very high pin counts can be produced in circular, rectangular, plastic and metal forms.

Optimal cabling density is achieved in a rectangular ultra high density connector made with Nano-D contacts and spacing inside a standard Micro-D shell size. Such a connector can accommodate a very large amount of pins while retaining excellent Micro-D reliability.

Most electrical and environmental performances are comparable to those of standard Nano-D connectors (250 V_{AC}, 200°C), combined with the robustness and shielding efficiency of the Micro-D metal shell which is compatible with all the hardware types available for Micro-D pigtails.

This same process can be applied to most of the standard and special Micro-D range, making it possible to have ultra high density versions of PCB connectors, wide flange versions, circular, rectangular and combo style versions with a mix of Micro-D and Nano-D contacts.
